

Azoproteite

© 2001-2005 Mineral Data Publishing, version 1

Crystal Data: Orthorhombic. *Point Group:* $2/m\ 2/m\ 2/m$. As prismatic crystals, often striated and skeletal, to 2 cm, typically poorly terminated, with a diamond-shaped outline on {001}.

Physical Properties: *Cleavage:* On {010}, good, may be a parting; on {001}, distinct. *Fracture:* Conchoidal. *Tenacity:* Brittle. Hardness = ~ 5.5 D(meas.) = 3.63(2) D(calc.) = [3.63] Paramagnetic.

Optical Properties: Translucent to nearly opaque; transparent in thin section. *Color:* Black. *Luster:* Adamantine. *Optical Class:* Biaxial (+). *Pleochroism:* Strong; X = pale bluish green; Y = dark green; Z = brownish red. *Absorption:* $Z > Y > X$. $\alpha = 1.799(2)$ $\beta = 1.822(3)$ $\gamma = 1.855(5)$ $2V(\text{meas.}) = > 70^\circ$ $2V(\text{calc.}) = 80^\circ$

Cell Data: *Space Group:* $Pbam$. $a = 9.26(1)$ $b = 12.25(1)$ $c = 3.01(1)$ $Z = 4$

X-ray Powder Pattern: Tazheran massif, Russia.
2.52 (10d), 5.07 (8), 2.16 (6), 2.02 (6), 2.77 (5b), 2.11 (5), 1.900 (5)

Chemistry:

	(1)
TiO ₂	15.40
B ₂ O ₃	19.07
Fe ₂ O ₃	16.01
FeO	5.16
MnO	0.11
MgO	45.01
Na ₂ O	trace
Total	100.76

(1) Tazheran massif, Russia; after deduction of calcite, spinel, forsterite, corresponds to $(\text{Mg}_{1.82}\text{Fe}_{0.13}^{2+})_{\Sigma=1.95}(\text{Fe}_{0.37}^{3+}\text{Ti}_{0.36}\text{Mg}_{0.25})_{\Sigma=0.98}\text{B}_{1.02}\text{O}_{5.00}$.

Mineral Group: Ludwigite group.

Occurrence: An uncommon late-stage mineral in the border zone in magnesian contact-metamorphic rocks associated with syenites; the deposit is estimated to contain 350 kT B₂O₃.

Association: Calcite, ludwigite, brucite, clinohumite, baddeleyite, tazheranite, perovskite, geikielite, forsterite.

Distribution: From the Tazheran alkalic massif, west of Lake Baikal, eastern Siberia, Russia.

Name: A Russian acronym honoring the Study of Deep Zones of the Earth's Crust (AZOPRO in Russian) sponsored in 1969 by the International Geological Association.

Type Material: Mining Institute, St. Petersburg, 1481/1–1481/3; A.E. Fersman Mineralogical Museum, Academy of Sciences, Moscow, Russia, 72890–72892; Natural History Museum, Paris; National School of Mines, Paris, France, V16383.
