

Crystal Data: Orthorhombic. *Point Group:* 2/*m* 2/*m* 2/*m*. Crystals are rough and rounded, to 3 mm, elongated along [001], showing {110} and {010}; as aggregates of anhedral crystals in granular masses.

Physical Properties: *Fracture:* Uneven to conchoidal. *Tenacity:* Brittle. Hardness = 4.5–5 VHN = 274–367, 316 average (100 g load). D(meas.) = 5.88 D(calc.) = 5.94 Magnetic.

Optical Properties: Opaque. *Color:* Black; gray-white with a yellowish tint in reflected blue light, yellow-brown to beige in reflected yellow light; white, pale yellow, or rosy internal reflections observed. *Streak:* Black. *Luster:* Submetallic, resinous on fractures.

Optical Class: Biaxial. *Anisotropism:* Perceptible to strong; pale gray to dark gray with brownish tint. *Birefractance:* Weak to imperceptible.

Total	[100.00]

(1) Vrančice, Czech Republic; recalculated to 100% after deduction of hematite 8.88%, quartz 2.02%; corresponding to (Pb_{0.93}Ca_{0.02})_{Σ=0.95}(Fe_{0.81}²⁺Mn_{0.25}Zn_{0.01})_{Σ=1.07}[(V_{0.96}As_{0.01})_{Σ=0.97}O_{3.90}](OH)_{1.10}.

Mineral Group: Descloizite group.

Occurrence: On specimens from old mine dumps from a polymetallic ore deposit.

Association: Hedyphane, calcite, hematite, willemite, quartz.

Distribution: From Vrančice, about 15 km south-southeast of Příbram, Czech Republic.

Name: To honor Dr. František Čech (1929–1995), Head of the Department of Mineralogy (1976–1990), Charles University, Prague, Czech Republic.

Type Material: Charles University, Prague, Czech Republic, 20037.
