

Hanawaltite

©2001-2005 Mineral Data Publishing, version 1

Crystal Data: Orthorhombic. *Point Group:* $2/m2/m2/m$. Subhedral to anhedral crystals, platy to bladed, striated \parallel [001], to 0.3 mm.

Physical Properties: *Cleavage:* {001}, good. *Fracture:* Uneven. *Tenacity:* Brittle. Hardness = < 5 D(meas.) = n.d. D(calc.) = 9.51 Decepsitates on exposure to sunlight, photoreducing to mercury.

Optical Properties: Opaque to translucent on very thin edges. *Color:* Black to very dark brown-black; in reflected light, gray, may have red-orange internal reflections. *Streak:* Black to dark red-brown. *Luster:* Metallic.

Optical Class: Biaxial. *Pleochroism:* Weak; bright bluish white to grayish white.

Anisotropism: Bright metallic blue. *Birefractance:* Moderate to strong.

R_1 – R_2 : (400) 26.2–37.6, (420) 25.2–34.8, (440) 24.2–32.5, (460) 23.3–30.6, (480) 22.4–29.0, (500) 21.8–27.7, (520) 21.2–26.7, (540) 20.8–25.9, (560) 20.5–25.2, (580) 20.3–24.6, (600) 20.1–24.1, (620) 20.0–23.7, (640) 20.2–23.3, (660) 20.3–23.1, (680) 20.2–22.9, (700) 20.0–22.8

Cell Data: *Space Group:* $Pbma$. $a = 11.790(3)$ $b = 13.881(4)$ $c = 6.450(2)$ $Z = 4$

X-ray Powder Pattern: Clear Creek mine, California, USA.

3.053 (100), 5.25 (80), 2.954 (70), 3.164 (60), 2.681 (50), 2.411 (50), 4.35 (40)

Chemistry:

	(1)
HgO	[14.27]
Hg ₂ O	[82.46]
Cl	3.33
S	0.00
H ₂ O	[0.34]
–O = Cl ₂	0.75
Total	[99.65]

(1) Clear Creek mine, California, USA; by electron microprobe, calculated for $\text{Hg}^{1+}:\text{Hg}^{2+} = 6:1$ and H_2O for $\text{Cl}+(\text{OH}) = 2.00$; then corresponding to $\text{Hg}_{6.00}^{1+}\text{Hg}_{1.00}^{2+}[\text{Cl}_{1.43}(\text{OH})_{0.57}]_{\Sigma=2.00}\text{O}_{3.00}$.

Occurrence: A rare alteration product of cinnabar, in a mercury deposit in silicate-carbonate rock hydrothermally altered from serpentinite.

Association: Calomel, mercury, cinnabar, montroydite, ferroan magnesite, quartz.

Distribution: Near the Clear Creek mercury mine, New Idria district, San Benito Co., California, USA.

Name: To honor Dr. Joseph Donald Hanawalt (1903–1987), American metallurgist, Ann Arbor, Michigan, USA, for his early work in X-ray powder diffraction.

Type Material: Canadian Geological Survey, Ottawa, Canada, 67396.
