Mineral Group: Pyrochlore supergroup, pyrochlore group.

Occurrence: In a rare-earth deposit in an alkali feldspar granite.

Association: Calcite, barite, celestine, albite, aegirine, aegirine-augite, fluorite, parasite-(Ce), thorite, thorianite, zircon, galena, sphalerite, magnetite, pyrite.

Distribution: At the Maoniuping mine, Mianning County, Xichang prefecture, Sichuan Province, southwest People's Republic of China.

Name: For a member of the *pyrochlore* group with dominant hydroxol in the Y structural site and calcium in the A structural site.

Type Material: At the Geological Museum of China, Beijing, P.R. China (M11800).
