

**Crystal Data:** Monoclinic. *Point Group:* 2/m. As irregular grains to 3 mm, intergrown within aggregates of skippenite.

**Physical Properties:** *Fracture:* Conchoidal. Hardness = n.d. VHN = 155-186, 166 average (25 g load). D(meas.) = n.d. D(calc.) = 7.82

**Optical Properties:** Opaque. *Color:* Black on a fresh fracture; white with a bluish tint in reflected light. *Luster:* Metallic.

*Optical Class:* *Anisotropism:* Moderate, in blue-gray to dark grayish brown.

(1) Otish Mountains deposit, Canada; by electron microprobe, ranges of 11 grains, the average of which corresponds to Cu<sub>2.36</sub>Pb<sub>1.26</sub>Bi<sub>3.70</sub>(Se<sub>6.21</sub>S<sub>1.74</sub>Te<sub>0.05</sub>)<sub>Σ=8.00</sub>. (2) Zálesí uranium deposit, Czech Republic; average electron microprobe analysis; yields Cu<sub>1.93</sub>Ag<sub>0.20</sub>Pb<sub>1.04</sub>Bi<sub>3.90</sub>(Se<sub>7.87</sub>S<sub>0.05</sub>)<sub>Σ=7.92</sub>.

**Occurrence:** In vein-type uranium deposits with other tellurides and selenides.

**Association:** Skippenite, soucekite, clauthalite, chalcopyrite, Au-Ag alloy (Otish Mountains); clauthalite, bohdanowiczite, nevskite (Niederschlema-Alberoda deposit).

**Distribution:** From the Otish Mountains uranium deposit, Quebec, Canada. At the El Dragón mine, Antonio Quijarro Province, Department of Potosí, Bolivia. From the Zálesí uranium deposit, Czech Republic, and the Niederschlema-Alberoda U-Se-polymetallic deposit, western Erzgebirge, Germany.

**Name:** For Professor David H. *Watkinson*, Carleton University, Ottawa, Ontario, Canada.

**Type Material:** n.d.
